Rationale for Design Choices

The colour scheme was kept the same as the previous submission due to the clean, professional feel of the look, making the colour scheme simple and the pages clean leads to less visual overload/overstimulation on possible consumers. A footer was added to complete the look of the website as the main pages seemed empty without them, the footer also allowed for more of the colour scheme to pop through which made the website seem less bland.

A video with overlaid text was added just beneath the promotion banner to draw more attention to the homepage while also not being too visually disturbing to the website's current design. Another video was placed after the featured products listing to also draw attention and fill in the empty space of the homepage.

The previous submission included hover effects in the navigation bar's text, the same was done in the footer and hover effects were added to the product cards and category cards for the website to appear less bland and ease the consumer into which contents on the website were simply text or images versus actual products or links to click on.

The overall design remains consistent across pages including the added wish list page, which follows the same layout as the cart page. The font and colouring are consistent, and the containers and animations all follow the same consistency across the website. The contact's page was improved with required fields as well as autofocus on the name input box, though the layout remained the same as the previous submission.

Overall, these changes kept the clean, professional look of the website but also grabbed attention much better, making the site less boring and much easier/intuitive to navigate and use. The added colour with the bolder footer and extra banner in the homepage along with the videos made the website less monochrome but kept to the 'tech' feel of the site. The site's audience hasn't broadened since these improvements, but rather been kept to tech enthusiasts, people who use technology to work, and gamers.

AI Declaration

Inline CSS was externalised with the already existing class names/IDs as well as with added ones, the IDs and classes called in the CSS file with copy-pasted formatting from the previous inline CSS submission. Slight alterations were made to add more hover effects to products and categories, as well as including the text hover highlighting in the footer created for this submission. The same table layout was copy-pasted from the cart for the wish list. AI was only used to assist with the spacing/placing of the elements in the footer (padding, margins, etc.). More icons were added in this submission as well (socials icons and wish list icon) using Fontawesome.

Plagiarism Declaration:

1. I know that plagiarism is a serious form of academic misconduct.
2. I have read the document about avoiding plagiarism, am familiar with its contents and have avoided all forms of plagiarism mentioned there.
3. Where I have used the words of others, I have indicated this by the use of quotation marks.
4. I have referenced all quotations and properly acknowledged ideas borrowed from others.
5. I have not and shall not allow others to plagiarise my work.
6. I declare that this is my own work.
7. I am attaching the summary of the Turnitin match overview (when required to do so).
